Copy [redacted]

2 April 1962

MEMORANDUM FOR : Chief, Special Projects Branch, DPD
SUBJECT : Mission Requirements for CORONA Mission 9033
REFERENCE : [redacted] dtd 29 March 1962, same subject

1. The referenced message did not give a proposed launch date, but our records show 9033 is tentatively scheduled for 26 April 1962.
2. The film type for the master and slave units should be SO-132 (J-23-7600). With final slit width determined by Lt. Colonel Murphy.
3. This office has still not received written recommendations for the horizon camera shutters from NPIC, so assume 1/75th of a second is desirable on all horizon cameras. This would be subject to change if 9032 is successful and a change is indicated by the results.
4. The auxiliary frame camera will use SO-130 (7J-30-150) with shutter speed set by Lt. Colonel Murphy. Again, successful results from Mission 9032 may give the experience factor to establish a firm recommendation for a setting for this instrument.
