23 JUL 1962

MEMORANDUM FOR: Chief, Development Division, OSA
SUBJECT: Additional Camera Operating Mode
for the CORONA/MURAL Program

1. It is requested that a feasibility study be conducted to provide the following:
 - a. Change camera operating modes to allow independent individual operation of the cameras. This will provide monocular coverage whenever it is desired. In addition:
 - b. Allow both cameras to be operated whenever stereo coverage is desired.
2. If the above change in operating modes would require sacrifice of the X and Y programming capability this would be agreeable. However, it would be most advantageous to maintain the present capability.
3. This request is submitted with the hope that if it can be accomplished it would provide the CORONA/MURAL program with capability of monocular coverage for areas of pioneer interest and stereo coverage over areas of highest priority. This action should have the same effect as that of increasing the film supply.
