Subject: FOREIGN PARTICLES IN FLIGHT SYSTEM

J-3 was the  
diff one.

Considerable amount of loose foreign particles were found on J-15 system by the customer at the Base recently. This condition has caused grave concern at both AP and customer quarters.

It is recognized that, while in transit between the AP facility and the Base, the payload system does not encounter the ideal clean room environment. Nevertheless, suspicion of laxity in conducting cleaning and vacuuming operations do prevail. Periodic reminder, to all responsible personnel close to these operations, to emphasize the need for clean and dust-free payload system is deemed essential to minimize the recurrence of the embarrassing situation.

Your positive response to this matter is solicited.
