MEMORANDUM FOR

The Hon. David Packard  
The Hon. Richard Helms

In recent months, as you know, the Land Panel studied the possibility of a near-real-time imaging system and recommended that the NRP develop such a system based on solid state sensors. The Panel is presently reviewing the status of the technology required for such a system in view of the accomplishments of the past six months. They are doing this in concert with members of the DOD Committee on   Recovery Systems so as to come to a common understanding and appreciation of the technical facts.

The Land Panel will be meeting within the next few days and I will make their findings available to you, in the event we consider this matter at the forthcoming meeting of the Executive Committee.
