28 December 1966

Code 5600

Additional funding on Electronic Warfare Stub 56-1174-67; justification  
for

1. The additional funding is necessary to procure the basic computational system to provide the diagnostic routines on the Analog to Digital Data-conversion instrumentation to be used operationally overseas in early April 1967. After screening the Commercial sources for systems of this type the proposal prepared for us by SEL (Serial #236612-007) has been selected as the most responsive in performance potential and timeliness in delivery. Therefore, it is recommended that the Supply Division go forth with the procurement on the most URGENT basis possible. Honeywell's delivery was not acceptable due to several elements of the system not being released for production, but still being in design. Delivery was anticipated as mid-May for the Honeywell system, with the tape peripheral machines destined to be among the first to be integrated with their computer.
