29 Dec 1966

Code 5600

Magnetic tape control unit, cables, high-speed paper tape punch and reader, paper tape spooler and teletypewriter; justification for procurement of

1. In response to the President's Scientific Advisory Committee (PSAC) the technical team supporting NRL Problem 56RO6-29 has studied the entire realm of potential means for fulfilling the most urgent National Intelligence Requirement in the earliest possible time. This procurement along with the Stub 56-1174-67 represent the overseas portion of this system for one site, which will provide a computerized data-conversion and sorting instrumentation complex complete with the diagnostic ability to readily establish a high confidence rating on the performance-ability of the system. It is requested that the Supply Division initiate an urgent procurement for the equipment listed on this order and in so far as possible set up an option to purchase additional systems of this type at intervals sufficient for delivery on 1 March, 1 May and 15 June. These options will do two things, assure that the company will do everything possible to supply each machine and portion of the system on the schedule thus established, and also will prepare the company for possible cost saving operations in the final instrumentation complexes. These options will have to be exercised at estimated 75 days in advance of the anticipated delivery dates so that the tape transports, for example, can be available.
