3 July 1961

Subj: PROPOSED OPERATIONAL PLAN FOR GREB II

1. It is proposed that the attached missions be interrogated as shown. Times and Ephemeris Data are based on early predictions and will be revised slightly as better data is available.
2. Passes 227, 229 and 231 will be the experimental passes to check station proficiency. Data collected will be retained as valid data from Phase I.
3. Following Phase I a period of 5 days when no operation would be conducted would be scheduled.
4. Phase II would start on Saturday 5 August and repeat 3 missions per day on alternate days through 20 August. This would correspond to the three missions per day on alternate days in Phase I. Predicted Ephemeris data is not now available covering this period so selection of mission numbers is not possible at present.
