NAVAL RESEARCH LABORATORY

WASHINGTON, D.C. 20390

IN REPLY REFER TO:

26 November 1967

TOP SECRET								
Subj: Collection Objectives - MISSION 7105								
Ref: (a) NSA - BYE - 60530-67 of 8 Sep 1967								
1. Reference (a) recommends certain changes in the tasking of								
2. The Navy desires to take a more positive approach to the 7105 collection problem, namely, provide better data and more timely process in the field. To this end has demonstrated a major improvement the data processing by digitizing in real time and through the use of small computer has demonstrated the ability to scan the data in terms (1) signal characteristics and (2) geographic locations.	t in a							
3. To provide better long term operation from 7105 and improve the final location accuracy for the system the Navy proposes: (1) addition digitizing equipment and associated computer be installed at equipped with the digitizing capability be tasked to inspect all the data (a) signal characteristics for specified emitters and (b) apply criteria and locations for all signals so identified and located. The field sorting would relieve NSA of much of their burden of processing and would provide timely response for any new emitters located so other resources could be brought to bear on the problem.	is							
) }•							
5. The Navy agrees that periodic review of the tasking in order to assure optimum capability is applied to the problem. Summar Jalut Region Control Systems Jointly
