

~~SECRET~~

Note to File:

TOG Meeting of 4 January 1968.

In attendance= HO.Lorenzen, R.D. Mayo, [REDACTED]

Action Items: NRL along with [REDACTED] should consult [REDACTED] about the use of the site after it is put on standby status...it was suggested that to put on standby was the same as to loose the capability.They are only running four per day now. An SOP should be developed to ascertain that now only is the station proficiency retained but to assure that any routine tape which is made at the site truly does get examined ~~and~~ evaluated and the technical feedback is routed back to the site and to NRL.

Each of the TOG principals should review the needs for improved security in the interrogation processes and make recommendations for improvement in this area....reduction of power, reduction of exposure etc. SOP changes in the near future to make improvements in this area.

NSA in their report disclosed that the first Locations report on 7105 is due next week and will contain [REDACTED] emottors and that the number of candidates located per orbit have varied between [REDACTED] per pass. There seems to be some instrumental error or uncertainty which renders the FM Tapes ~~xx~~ of no use in the locations processes so that this report uses only [REDACTED] tapes.

NSA testimony on the [REDACTED] are somewhat confused in that [REDACTED] wants all tape of the future to be digitized and this means that there will be only [REDACTED]
