

~~TOP SECRET~~ []

MISNER MEETING ON ADJUSTMENT OF SPACE FOR a limited period:

CLASSIFIED R & D Payload Effort now underway has levied an unbear^eable demand on the spaces which now demand 7 men occupy a single Office and share a single Laboratory space....we need temporary rel^eief so that the Cleared and Unclassified jobs can continue simultaneously. This Payload effort is imposed by the demands from NSA to expedite the ALERT capability of our program, a Charter which has greater Urgency than that now supporting this overall effort. The major effort in this PAYLOAD design, construction, testing and interface systems-engineering has been assigned to the team under 5614 so that the overall program schedule will not be in jeopardy...5170 personnel now are the pacing team and their assistance will be limited in this R & D effort.

Couple this Payload job with that for the normal systems up-date required in the ove seas/^{site}data-collection:

New receivers [] each on March 1).

New Multicouplers, designed, but not under construction

To be built at HRB and tested here at NRL.

Antenna Polarization Switching system, [] sites worth

Digital Svstem for [] (anticipated)

[]
Test Instrumentation racks (2 each to each Digital site)

1-mc Buffer Amplifier and distribution system

Complete revamp of Instrumentation and spaces in []

Standard QC Analysis Instrumentation Complexes for [] sites.

[] up-date for operational evaluation.

These efforts will cause us lots of pain and suffering within the spaces presently available to 5614 without the problem of ~~mixed~~ Classified work in the same spaces *and increased personnel.*
