

~~Secret~~

NOTE TO FILE 8 Februray 1968 after meeting with [redacted] and Conlon.

1. "Wide Band Team" has been assembled since Jan 1, 1968 to look at hot signals from the Multigroup and to a lesser extent from the P-11. It is a group made up of the design engineers from Lockheed and other contractors who respond to the wishes of Aerospace...as an example they must have briefed the Aerospace team and then SORS on [redacted] after P-11 FACADE got the signal in its early revs. This allows the West Coast group to "Close the LOOP" quickly on signals of high interest. They complained bitterly when NSA used the 22 Dec. POPPY observation of the 89.6 PPS signal as the basis for the NSA report when FACADE and POPPY had nearly simultaneously observed the same signal on 19 Dec.. [redacted] took over a week longer to get their tape of the 19th back to NSA .
2. P-11 FACADE is a 250 to 2200 Mc Superhet and Xtal-video which flew Nov 2. on about rev #2 700 the 1Kmc to 2.2 kmc system went out.
3. P-11 TIVOLI is a 100 to 4000 mc Superhet and Xtal-video flew on 24 Jan. introuble with the VCO which are necessary to break out data....
4. MUE TIGROUP flew on 21 January 1968 and it is in trouble with the analog output, Wide Band Alarm will not turn on Wide Band recorder.. Digital output is good4 analog tapes is all they expect.
5. NSA [redacted] now that he has given up the job of Dubbing POPPY tapes, Ray Potts has given them a job of looking over the computer printout from the Machine analysis and trying to do the job that Conlon's gang have done in the past...so far the only output from this has been given in the Weekly staff meetings and the check out made by Conlon of the validity of these findings shows Zero validity. The men are new at the job but it does not seem to be very promising either. As a tool to help the manual analyst, the computer print out is useful but it will not stand alone yet.

Handle via BYEMAN control system only

6. Conlon will support the HRB Singer team at State College doing engineering evaluation on POPPY Data and will assist in publishing the information so that SORS and others can weigh the capabilities. He will send some tapes ^(20 to 30) to State College through [redacted] an NSG. to give them a start.

The P-1 tape taken on 22 Dec Observation of TRIAD signal is on its way back [redacted] lege, NSA cant use it so they want results
