1/16 July 75 NRB~~Top Secret~~

07 -

1. ~~Alert~~ ^{target of opportunity} concept - for redirection of tasking
of (a) ~~07~~ and/or (b) other missions

a-1. what time needed for alert & turn
around command to 07 ?

2. type of data to be collected on re-tasking

3. how long is collection for effectiveness
for [] wide band sample?

- [] ; strictly detect + video ?

b-1. could 07 [] provide rapid alert ?

- what mechanisms to re-task P-11's
on 770 ? - present experience ?

^{operational}
c - would there be difficulty in
processing special target-of-op. signals
as visualized by concept ?

d - additional ground site capabilities
needed ?

2. What net improvement ^{in data} is expected from
the [] ^{al site}

a. for location

b. for [] etc.

**Handle Via BEMAN
control system only**

~~Top Secret~~

3. Can 07 be effective as a locator of X-band
& K-band emitters ?

a. movement of targets - effect of

b. duration of intercept

c. non-circular scans

~~Top Secret~~

Band Allocations -

- 1 - for 50 - 100 Mc ,
10.5 to 14.5 , and up except on
band edges
- 2 - added ^{duplicate} band for 810 - 930
- 3 - Should there be further split out
of higher X-, K- bands to preclude
_{rate} pulse overloading?
- 4 - Any potential solutions to location in
higher bands?

Handle Via BHEMAN
control system only
