

~~Top Secret~~ [redacted]

NOTE FROM [redacted] 18 January 1972.....

1. Ed Barker from NIPSSA will be calling on us, depending upon availability he should see Lee, Me or [redacted] in that order with the goals as follows:

Begin to document for briefing purposes some of the early evidences of the Mission 7107 operational capability, using the NIPSSA printouts. This can also be done by NIPSSA/NSG as we wish...but get the stuff ready.

There is a new "Anti-Ship Missile" threat being assessed by USIB. As one reaction, this may be added to the other Number ONE priority Intelligence requirements. Of course this may not come to pass, but in any case this requirement will reflect itself in our collection priorities even if it is not #1. Therefore we should in our thinking, be ready to exploit the operational capabilities of the program toward the solution of this extremely difficult "Time critical" Problem. Some of the methods of enhancing our capabilities in this direction:

1. Total "Weapon System" intercept
2. Associative Processing to correlate the various key emissions that identify the anti-ship missile systems.
3. Increase the "Brief Signal" geopositioning capability.
- 4.

Handle via
BYEMAN/TK/Comint
Control systems
only jointly
