From: DMP [redacted]

P-118

Subject: New Mission Planning Task to provide coverage of the [redacted]

25X1
25X1

Purpose: Provide [redacted] with a method to task Ursala and Raquel in response to notification of [redacted]

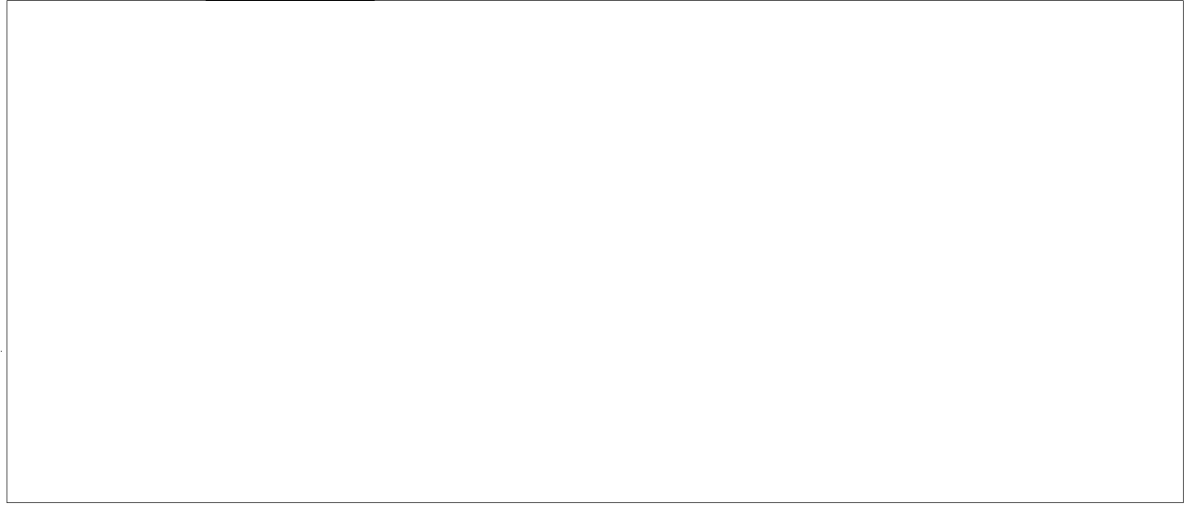

25X1
25X1

Method:

1. Provide coverage of the closure area as indicated in Table 1. The time of tasking to include the time of the closure plus the two hour period after the closure.
2. Ursala III will provide normal General Search coverage (Bands 1, 2, 3, 4/Mode EA) unless otherwise indicated in Table 1 or special guidance is received.
3. Raquel coverage is based on an appropriate point target and corresponding sectors as indicated below. To preclude large pulse counts on segments, the readins should be limited to the areas covered by the sectors. Raquel is to be considered an Omni acquisition task with the PFM priority DF over Omni. Generally, the signals will not exhibit high power. Therefore, maximum receiver sensitivity should be maintained.

Tentative Criteria for Raquel Tasking Against [redacted]
