REPLY TO
ATTN OF LBZ/2712

18 February 1960

SUBJECT: WEEKLY DIARY - 12 thru 18 February 1960

TO: LBG

Satellite Systems

1. 6594th Satellite Test Wing Support: (UNCL)

BMG/BMC Project personnel convened with the 6594th Test Wing Groups on 11 and 12 February 1960 to review equipment requirements for the Satellite Test Center at Sunnyvale, California. The list contained a limited range of both personal and functional equipment. Agreements reached at these meetings resulted in the categorizing of the list in three parts:

a. Personal equipment will be carried under a normal UNCLIS AUTHORIZED LIST and shall be obtained by the Wing.

b. Functional and operating equipment, i.e., electronic benches, oscilloscope, power units, etc., will be furnished as GPP through the IAM, held accountable under an AFH account.

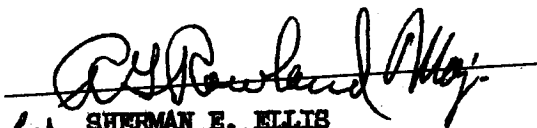

c. Machine tools and some special test equipment will be considered under the facilities contract.

2. Overtime Utilized on Satellite System Program: (UNCL)

The rate of overtime utilized by IMSD on satellite system programs for December 1959 and January 1960 was respectively 3.8% and 7%.

3. Definitization of the Communication & Control Contract AFO4(647)-347 with IMSD: (UNCL)

Negotiations are scheduled to commence 23 February 1960 for the negotiation of the technical proposal. This will be followed shortly thereafter by negotiation of the cost proposal.
