(U) PROGRAM MANAGER'S STATEMENT

(U) Introduction

(S) [REDACTED]

(S) [REDACTED]

(U) The US is arguably more reliant on overhead collection than ever before. To a large extent, satellite reconnaissance is the foundation for global situational awareness, and as such, it is an essential underpinning of the entire US intelligence effort. Space collection provides unique access to otherwise denied areas to provide persistent and responsive collection; and it does so without risk to human collectors or infringing upon the territorial sovereignty of other nations. It also enables users to

¹ (S//NF) [REDACTED]

² (S//NF) [REDACTED]

quickly focus on almost any point on the globe to rapidly respond to emerging situations or to monitor ongoing events. The NRO provides direct support to the war on terrorism, deployed military forces, and other IC and DoD activities requiring near real-time situational awareness and sustained high resolution/high sensitivity collection capability 24 hours per day, seven days per week.

(U) Strategic Direction

(U//FOUO) The NRO is fundamentally transforming the way it conducts business to more effectively respond to the changing intelligence environment and improve support to its customers. [REDACTED]

More importantly, intelligence problems are becoming more complex and increasingly require synergistic, multi-INT, multi-source solutions.

(S) [REDACTED]

~~(S)~~

Reports provided in November 2007, and the FY 2007 IC Highlights reports to be provided under separate cover, meets the requirement for an annual Performance Accountability Report for the IC. Additionally, we will publish an FY 2007 NRO Highlights report in February 2008. I am committed to demonstrating that our resources produce measurable results.

(U) In the final analysis, NRO on-orbit and ground station performance is directly linked to the effectiveness of the NRO's acquisition processes and the quality of the products delivered from NRO development efforts. Therefore, acquisition cost, schedule, and performance measures are key metrics of NRO success. Cost performance and schedule milestones are indicative of progress during the development phase, and delivered performance—hardware as well as software capabilities—ultimately define and limit how well the NRO is able to perform against IC tasking requirements. Outside factors occasionally affect NRO's ability to achieve our acquisition cost, schedule, and performance measures. NRO acquisition measures are fully defined in its Baseline Agreement and Acquisition Reports which are developed in collaboration with NRO customers and the Office of the DNI. A subset of these measures is included in this document.

(U) At the architectural-level, NRO performance against IC-level commitments is reflected in the NRO's ability to meet its Functional Availability requirements. Functional Availability requirements are the basis for all satellite acquisition and replenishment planning. Performance in this area is driven by NRO, as well as IC controlled factors and requirements.

(U) Constellation Fragility

~~(S//TK//NF)~~

(U) Performance Measures

(U) This budget request integrates IC performance plans with the request and includes performance information supporting the IC's migration to a complete performance budget by the FY 2010 request. Detailed performance measures and results are integrated throughout the request. This request, in concert with the FY 2007 IC Agency Financial

~~(S//TK//NF)~~

(U) The FY 2009 Budget Request

(U) The NRO FY 2009 request supports the *NIS*, the IC's 500 Day Plan, and documented user requirements. It also supports the NRO's long term efforts to implement the *NRO Strategic Framework*. At the summary level, our FY 2009 request:

• ~~(S//TK//NF)~~

• ~~(S//TK//NF)~~

• ~~(S//TK//NF)~~

• ~~(S//TK//NF)~~

• ~~(S//TK//NF)~~

- (U) Funds studies and analysis, requirements development, and initial development/deployment of new collaborative data sharing tools to include tools to support sharing with tactical environments.
- (U) Continues the transition of current diversified ground capabilities toward a single, unified ground architecture.

(U) Conclusion

(U) This request represents a balance between responsiveness to immediate and near-term user needs and the imperative to maintain the longer-term investment levels necessary to sustain collection throughout the FYDP. This request also is responsive to IC priorities and supports the technical, organizational, and managerial initiatives necessary to realize the vision outlined in the *NRO Strategic Framework*.

(U) Management Oversight

(U) Management oversight for the NRP is provided by:

- (U) Director of National Intelligence.
- (U) Secretary of Defense.
- (U) Office of Management and Budget.

(U) Appropriations Use

~~(S//NF)~~

(U) Funding for *National Intelligence Strategy* Mission Objectives

(U) The NRO's purpose is summarized in 50 USC 403-5 as follows: "the research and development, acquisition, and operation of overhead reconnaissance systems necessary to satisfy the requirements of all elements of the intelligence community." Under this purpose, the NRO provides and/or operates as a continuing service, suitable overhead reconnaissance systems that enable NRO and its partners to plan, direct, and perform overhead collection; to process and exploit overhead and

associated non-overhead data; and to distribute, disseminate, share, and communicate intelligence as necessary to satisfy the requirements of all elements of the IC.

(U) The NRO's key role in the partnership is to keep its systems available and capable on a continual basis to satisfy mission partner established requirements. This includes regularly replenishing the capabilities and modernizing current capabilities in response to its partners' approved requirements. As a result, NRO systems support all of the NIS Mission Objectives, primarily through the operational availability of its satellites and ground stations. Specifically, satellite normalized operational availability measures the percentage of time each on-orbit system (including command and control and any relay) was available for operations during a fiscal year, normalized to beginning of life.

(U) The operations of SIGINT and GEOINT Stations, and GEOINT/SIGINT Integrated Ground Development activities support the NIS Mission Objectives and are reflected in Figure 1 that follows. These ECs are included in the Processing and Exploitation functional category. The Collection and Operations funding reflects NRO compartmented programs funding included in the Sensitive Technical Collection EC. Finally, Research and Technology funding reflects Advanced Technology Demonstrations as well as Basic and Applied Research projects.

(U) Figure 1 depicts NRP funding associated with each mission objective. Mission Objectives 1, 2 and 4 are slightly higher due to the inclusion of Compartmented Programs, Advanced Technology, and Ground Segment Development projects. Since projects support more than one mission objective, the total funding shown exceeds the NRP budget request. Note: Funding for acquisition projects that have not achieved an initial operating capability, and projects that provide (or will provide) general support for intelligence activities (e.g. logistics, infrastructure, corporate management), are not included.

FY 2009 Mission Objectives Funding Summary

Figure 2.

(U) WORKFORCE PROFILE

(U) The NRO is responsible for the development, acquisition, launch and operation of overhead reconnaissance capabilities that are essential for US national security. As part of the IC, the NRO plays a primary role in achieving information superiority for the US government. The Director of the NRO also serves as the Assistant to the Secretary of the Air Force (Intelligence Space Technology). As such the Director of the NRO supports the Secretary of the Air Force in carrying out the DoD Executive Agent for Space responsibilities.

(U) NRO partners with NSA and NGA to provide

- Global communications.
- Signals intelligence and near real-time imagery.
- Critical information to national, military and civil customers.

(U) The NRO is functionally organized around four directorates: IMINT, SIGINT, Advanced Systems and Technology and Communications. Each of these directorates is supported by financial management, contracting, systems engineering, and customer and mission support. The NRO population consists mainly of civilian and military personnel belonging to the Air Force, CIA, Navy, Army, NSA, and a small contingent of officers from other government agencies. The NRO is unique in that its workforce is supplied by the intelligence and defense communities. The NRO does not employ its own workforce and does not directly hire personnel; the NRO budgets for and reimburses other organizations primarily for civilian assigned personnel. The workforce charts refer to the NRO authorized civilian positions and does not include the military or CIA Office of Development and Engineering (OD&E) positions assigned to the NRO. Following are demographics on the NRO workforce:

(U) **Grade Distribution by Age:** The NRO grade distribution is a reflection of the technical expertise required to achieve its space mission with a majority of the workforce residing in the senior grades: GS-13 thru senior executives. Furthermore, the NRO average age is consistent

with the trend in the federal government with NRO employees in the late-40's to mid-50's bracket holding senior ranking positions with 15 plus years of service.

(U) **Years to Optional Retirement:** As is the case in many federal organizations, the NRO has a growing number of experienced officers with or approaching retirement eligibility. Of the NRO current workforce, 38 percent will be eligible to retire over the next 5 years and 58 percent will be eligible to retire over the next ten years.

(U) **Workforce Positions and Attrition Rates:** NRP civilian positions have been stable from FY 2004 through FY 2008; however, there is a planned increase of 66 civilian positions in FY 2009. The NRO has historically experienced stable fill rates given its unique staffing model. This staffing model results in NRO authorized DoD and CIA civilian employees providing the stability for the workforce while military members rotate to new assignments outside the NRO every three to four years. The NRO average fill rate is projected to continue at 85 percent due partially to the increase in positions and the ability of parent organizations to meet these new requirements.

(U) **NRP Workforce Positions by Budget Category and Training Dollars by Budget Categories:** The majority of civilian employees work in mission support occupations, with the remaining civilian population working in core mission areas: research and development, engineering, information technology, and operations. The distribution of training dollars is proportional to the distribution of the workforce according to mission area/budget category, noting approximately one third of the training budget within the Enterprise Management and Support Budget Category directly supports the NRO's core missions of acquisition management and system engineering. In addition, parent organizations provided specific training for their members over and above what the NRO dollars provided. The NRO has historically received high marks for its commitment in providing quality training and educational opportunities to meet mission requirements and the professional needs of its workforce. This emphasis on training and education will continue with the newly established NRO University

which will create and sustain training programs focused on clear corporate objectives. This integrated, career-based approach to training and education will ensure employees are grounded in a shared understanding of the NRO mission and principles.

(S//NF)

(U) Staffing and Demographic Trends:

(U) NRO fill rates have remained stable over the period FY 2004 – 2007. Given the transient nature of the workforce and the realities of filling classified positions, on the surface this trend appears positive. However, the NRO's average fill rate is 85 percent, meaning that 15 percent of NRO positions are vacant. Fill rates vary by partner agency and occupation and are due to partner agency workforce policies.

(U) In order to meet Congressionally-directed manning levels, the Department of the Air Force reevaluated their process for filling Special Program Assignments for military personnel. Additionally, the Department of the Air Force utilized the following force shaping measures to reduce end strength during this time period, which has had some affect on the NRO.

- (U) Force Shaping Boards targeting company grade officers for early separation.
- (U) Encouraging early separations through Voluntary Separation Pay for captains and majors.
- (U) Selective Early Retirement Boards for senior officers.
- (U) Reenlistments for personnel in or willing to cross-train into occupations requiring critical skills.

(U) Currently, the Air Force attempts to maintain a consistent fill of their NRO positions. In the past, these assignments were 4-year tours exempt from deployment. As a result of the Air Force's contributions to the Global War on Terrorism, recent policy changes have evolved thus affecting Air Force personnel assigned to the NRO in two ways: Air Force military tours for contracting officers and contracting enlisted members are no longer exempt from deployments and the current fill policy for all specialties is at a rate less than 100 percent, but based upon rates higher than worldwide entitlement (or fill) rates. However, manning levels at NRO operational sites remain staffed at 100 percent. Given that the Air Force military personnel account for significant portions of NRO mission critical occupations (i.e. 34 percent of acquisitions and engineers, 55 percent of operations, and 78 percent of information technology), any decrease in manning rates will strike at the heart of NRO's mission capabilities.

(U) Similar to the Air Force military personnel, the Navy military personnel are subject to deployments. While Navy military fill rates have remained steady, averaging above 80 percent, the personnel assigned to the NRO must still respond to mid-tour deployment needs, thus reducing the number of personnel actually working at the NRO.

(U) An additional area of concern associated with growth is inexperienced personnel. For example, new arrivals (between FY 2003 - 2006) from the CIA have significantly less CIA experience upon arrival than those arriving between FY 1997 - 2002. As a result, the NRO must now be prepared to train and develop these less experienced employees.

(U) The NRO has a growing number of new employees, including a significant number of former military and government civilians, who have limited experience within their new parent organization. Of the NRO current workforce, 60 percent of GS-12's and below have five years or less experience with their parent agency. Included in the 60 percent of the workforce with five years or less of service with their parent agency, approximately 65 percent were hired by the CIA with less than full performance level experience (based on grade/rank at the time of hire) in their occupation.

(U) Consolidated Employment Plan and Strategy

(U) The Consolidated Employment Plan concept currently focuses on civilian positions and personnel funded by each agency. However, focusing solely on civilian issues presents a limited view of the NRO workforce requirements given that the military and non-NRP funded employees represent a large component of the NRO workforce. Thus, any complete discussion of the NRO workforce would include all components, to include those mentioned above as well as Federally Funded Research and Development Center, Contract Advisory and Assistance Services, and Systems Engineering and Technical Analysis contractors in order to present a complete and accurate description of issues affecting the workforce.

(U) The NRO has a limited but expanding role in recruiting and maintaining workforce manpower levels. The nature and complexity of the NRO workforce demands that we work through partner agencies. However, the NRO is working to ensure an effective "corporate look" at the health of the total NRO workforce. With increasing demands for talent both within the NRO and the partner elements, the NRO is taking an active approach in all phases of the recruitment process:

- (U) Identifying and defending requirements.
- (U) Participating in efforts to locate potential talent pools.
- (U) Interviewing and selecting candidates for NRO requirements.
- (U) Maintaining contact with applicants throughout the process.
- (U) Ensuring that positive socialization occurs once applicants enter on duty with the NRO.

(U) Partner agency workforce initiatives plus demographic and occupation trends, directly impact the talent pool from which the NRO draws. For example:

- (U) Changing partner agencies' staffing policies and priorities impact their capacity to staff existing and new NRO positions.
- (U) Deployment of military personnel to support the Global War on Terror for periods of 6-12 months results in positions that are filled on paper only.

- (U) Demographic realities of the partner agencies' workforce are reflected in the NRO workforce as well.

(U) In response to these challenges, the NRO is implementing a strategic approach to workforce modeling, aligning short- and long-term workforce requirements against partner element talent pools, taking into account workforce demographics and partner element workforce strategies to assess impacts on talent available to the NRO. This effort will provide the data and information required to support requests to partner elements, the DNI, DoD, or oversight bodies for changes to the NRO staffing model and/or mix.

(U) In 2006, the NRO and Air Force signed a Statement of Intent, which included the establishment of the Space Assignment Advisory Board. The goal of the Advisory Board is to develop a greater pool of senior space leaders with operations and acquisition experience. In 2007, the NRO and the CIA signed a revised MOA regarding management and development of the CIA workforce at the NRO. The revised MOA includes initiatives to ensure consistency and equity across the CIA workforce at the NRO, streamlining workforce management processes and procedures and delegating authorities to NRO managers.

(U) FY 2009 Program Build Adjustments

(U) The majority of the new positions requested in this budget will be civilian Air Force. The NRO has requested an 11 percent increase in civilian Air Force and Navy positions and a 1 percent increase in non-OD&E CIA positions. The increase responds to the impact of Air Force workforce shaping initiatives and deployments, and Congressional concern to reduce contractor support. The majority of the Air Force civilian increase are in the acquisitions and contracting occupations and intended to mitigate the reduction in the staffing. The CIA add is focused on building the NRO's enterprise IT capabilities.

(U) Description

(U) The Low Altitude Integration and Support project provides resources for engineering and technical assistance SIGINT LEO, E2 maintenance, travel, awards, and training.

(U) This project provides the Contracted Advisory and Assistance Services (CAAS), non-CAAS, and Federally Funded Research and Development Center (FFRDC) engineering and technical assistance resources to support the Low Altitude Integration and Support efforts which include:

• (S//TK//)

• (S//TK//)

• (S//TK//)

- (U) Conducting independent reviews of prime contractor acquisition performance.

• (S//TK//)

- (U) Evaluating the C&C segment development and special studies and analyses of system upgrades.

- (U) Conducting acquisition planning.

- (U) Adaptive and corrective E2 maintenance and anomaly support.

• (S//TK//)

- (U) Maintaining key program documentation, including the specifications, interface control documents, CONOPS, risk management plans, verification plans, and readiness plans.

(U) The project provides resources for personnel assigned within the SIGINT Low Expenditure Center to travel and receive training in support of the mission. Awards are given in recognition of outstanding performance on a yearly basis to deserving personnel.

(U) LAUNCH
(U) LAUNCH VEHICLES

This Exhibit is ~~SECRET//NOFORN~~

Totals may not add due to rounding

(U) Description

(U) The primary purpose of this project is to procure EELV and conduct integration activities for NRO satellites. The NRO procures standard EELV hardware on a fixed price basis, fully funded two years prior to launch. Well-defined mission unique hardware plus integration efforts are incrementally funded beginning up to five years in advance of the launch date. The structure of the EELV contracts allows separate funding and accounting for NRO missions. The NRO has procuring contracting officer and contracting officer's technical representative authority for all NRO delivery orders on the Air Force EELV contracts.

(U) Schedules for Launch Vehicles are as follows:

**(U) LAUNCH
(U) LAUNCH CAPABILITY INFRASTRUCTURE**

THIS EXHIBIT IS SECRET

Totals may not add due to rounding

(U) Description

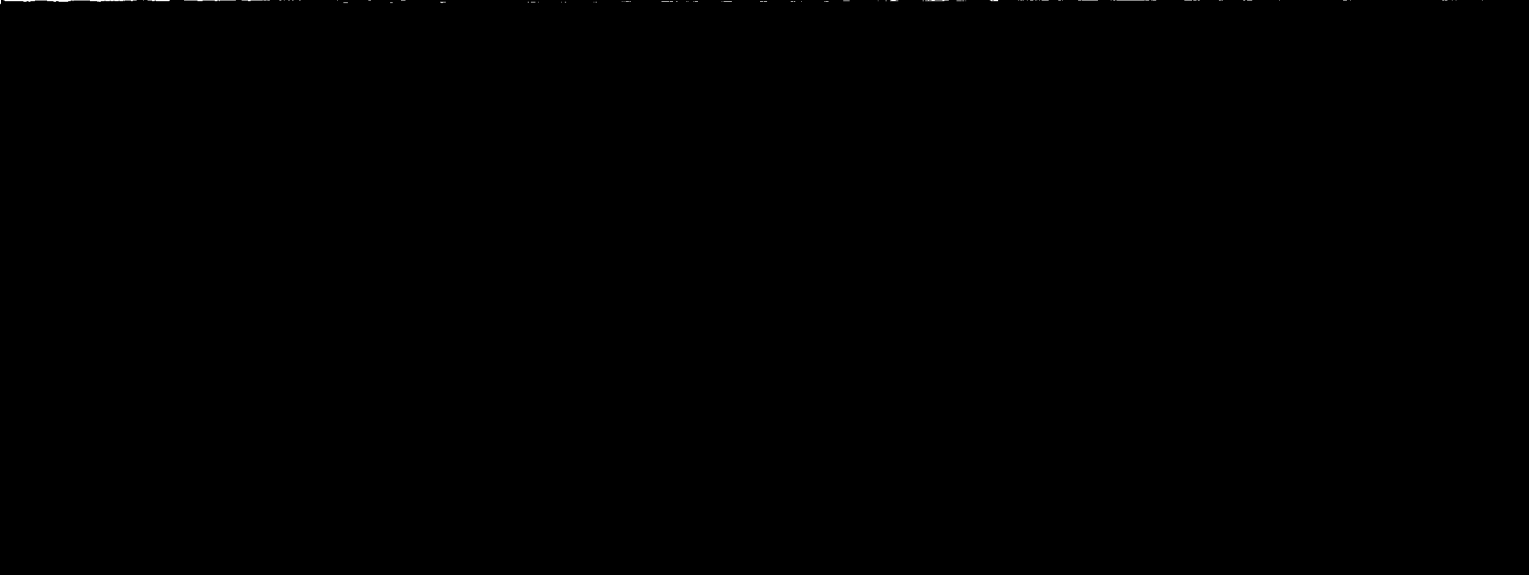

(U) This project funds the EELV Launch Capability (ELC) contract to maintain the capability to launch government missions. It is separate from launch vehicle hardware, which is funded by the EELV Launch Services contracts. This contract arrangement is necessary because the robust commercial market envisioned in the original EELV construct in 1998 never materialized and the government is now the primary EELV customer. The funds in this project support retention of critical skills at the EELV contractor facilities and at the launch sites, and maintain proficiency of the booster contractor workforce.

(U) The landscape of US launch infrastructure changed significantly in December 2006 when the United Launch Alliance (ULA) was officially established to merge the launch processes of both Lockheed-Martin and Boeing into a single joint venture. ULA maintains both launch vehicle families, Atlas and Delta EELV, in order to strengthen assured access to space and to provide optimum flexibility for meeting required lift capabilities.

(U) The NRO and the Air Force are full partners in ensuring EELV launch capability for the nation. The funding request for this project represents the NRO's 30 percent share of the EELV ELC contract.

(U) LAUNCH OPS AND ENGINEERING**

This Exhibit is SECRET//NOFORN

Totals may not add due to rounding

(U) Description

(U) The Launch Operations and Engineering project provides launch related support for all NRO satellite programs. Specifically, this project supports:

- (U) The NRO Payload Transportation System which provides secure transportation from factory to launch base and throughout launch base processing for all NRO satellites using NRO launch base facilities.
- (U) Use of forklifts, tractors, trailers, and other mechanical hardware for satellite vehicle (SV) electrical aerospace ground equipment and SV mechanical aerospace ground equipment.
- (U) SV and mission documentation requirements, including those required by the National Environmental Policy Act, and Occupational Safety and Health regulations.

- (U) Eastern and Western Range instrumentation support.
- (U) NRO Operations Squadron (NOPS) launch support, downrange/ascent telemetry capture, and processing operations for NRO launches.
- (U) Contracted Advisory and Assistance Services, Systems Engineering and Technical Analysis, and System Integration support.
- (U) Independent validation and verification (IV&V) of launch contractor mission design parameters.
- (U) NRO launch base administrative facility O&M.
- (U) NRO mission unique (secure) communication at the launch sites (e.g., secure launch pad communications for NRO payloads).

(U) GEOINT/SIGINT INTEGRATED GROUND DEVELOPMENT, ENGINEERING & MANAGEMENT EXPENDITURE CENTER

(U) Introduction

(U) The GEOINT/SIGINT Integrated Ground Development, Engineering & Management Expenditure Center (Ground EC) has been restructured to support the transition of the current diversified architecture to a single, integrated architecture focused on providing multi-INT solutions to intelligence problems. This restructure furthers the unification of the NRO Ground EC begun in FY 2008 CBJB.

~~(S//TK)~~

- (U) Adaptive and responsive tasking, seamless interfaces between data providers and analysts.
- (U) Information sharing
- (U) Timely responsive production of high-quality intelligence products and services directly to meet current and future customer analytic priorities.

(U) To meet these objectives, the NRO UGA will enable:

- (U) Multi-INT, cross-site/cross-system (CS/CS) tasking, cueing, and cooperative collection; change detection, data fusion, data filtering, and data and information access; and global situational awareness.
- (U) Rapid insertion of technology for interoperability and to keep pace with evolving targets and threats.
- (U) Insertion of adaptive mission applications by applying commercial, state-of-the-art information technologies.

(U) Budget Crosswalk

(U) The following table reflects changes in the FY 2009 request from FY 2008 appropriations.

(U) Description

(U) The Enterprise Architecture and Planning project provides resources to support the secure and effective management of NRO IT resources and the IT workforce. The CIO advises the Director, NRO and NRO senior managers on all IT-related matters. The CIO develops NRO IT strategy and policies that incorporate National, IC, Federal, and DoD guidance into the NRO enterprise IT architecture. The CIO has a mandate to develop and implement an NRO Information Resources Management (IRM)/Capital Planning and Investment Control (CPIC) process to govern how the NRO evaluates, selects, acquires, controls, manages, operates, and maintains IT.

(U) Description

(U) The Basic Research project provides funding for new and innovative sources and methods through the Director's Innovation Initiative (DII), the Innovative Solutions Initiative (ISI), and white papers proposed by industry, academia, other government organizations, and laboratories.

(U) The DII solicitation provides unclassified access to revolutionary R&D concepts and provides a risk-tolerant environment to invest in cutting edge technologies and high-payoff concepts relevant to the NRO's mission. Examples include investigating tunable SIGINT filter technologies, developing faster and more efficient spacecraft maneuvering algorithms, and using carbon nanotube-based fabrics in integrated circuits to reduce circuit size without increasing power. Developers, both traditionally and non-traditionally associated with the NRO, are provided the opportunity to participate in building the NRO of the 21st century.

(U) APPLIED RESEARCH

This Exhibit is ~~SECRET//NOFORN~~

Totals may not add due to rounding

(U) Description

(U) The Applied Research project funds the NRO's advanced research and development (AR&D) activities which enable evolutionary and revolutionary capability improvements to current and future GEOINT, SIGINT, communications, and ground systems. AR&D efforts funded by this project are focused on rapidly developing the technologies to enable the following six capabilities:

- (U) Reconnaissance: Enhance collection to enable rapid location of suspected targets over wide areas, increasing effective persistence and automated search.
- (U) Surveillance of Known Threats: Use new sources and methods to improve our ability to monitor the status of known threats and areas of interest.
- (U) Detect Radio Frequency (RF) Sources: Increase our ability to detect low power RF sources over very wide areas with greater sensitivity.
- (U) Information On-Demand: Provide net-centric interconnectivity and high bandwidth to ensure information is available anywhere on demand.
- (U) Value-Added Information: Deliver value-added information by integrating and processing products from various collection systems.
- (U) Cross-cutting Technologies: Develop innovative and adaptive capabilities to meet global challenges.

(U) AR&D efforts under development within this project can be further aligned to the principal mission area supported:

- (U) GEOINT Technology.
- (U) SIGINT Technology.
- (U) Communications Technology.
- (U) Crosscutting Technology.

(U) Examples of specific technologies for each mission area include but are not limited to:

(U) GEOINT Technology

(U) Description

(U//FOUO) The Acquisition Management project includes acquisition support resources for the IMINT, SIGINT, and Communications (COMM) Directorates. Typical acquisition support activities in this project include travel, training, awards, front office operations, financial management, security, and miscellaneous program support.

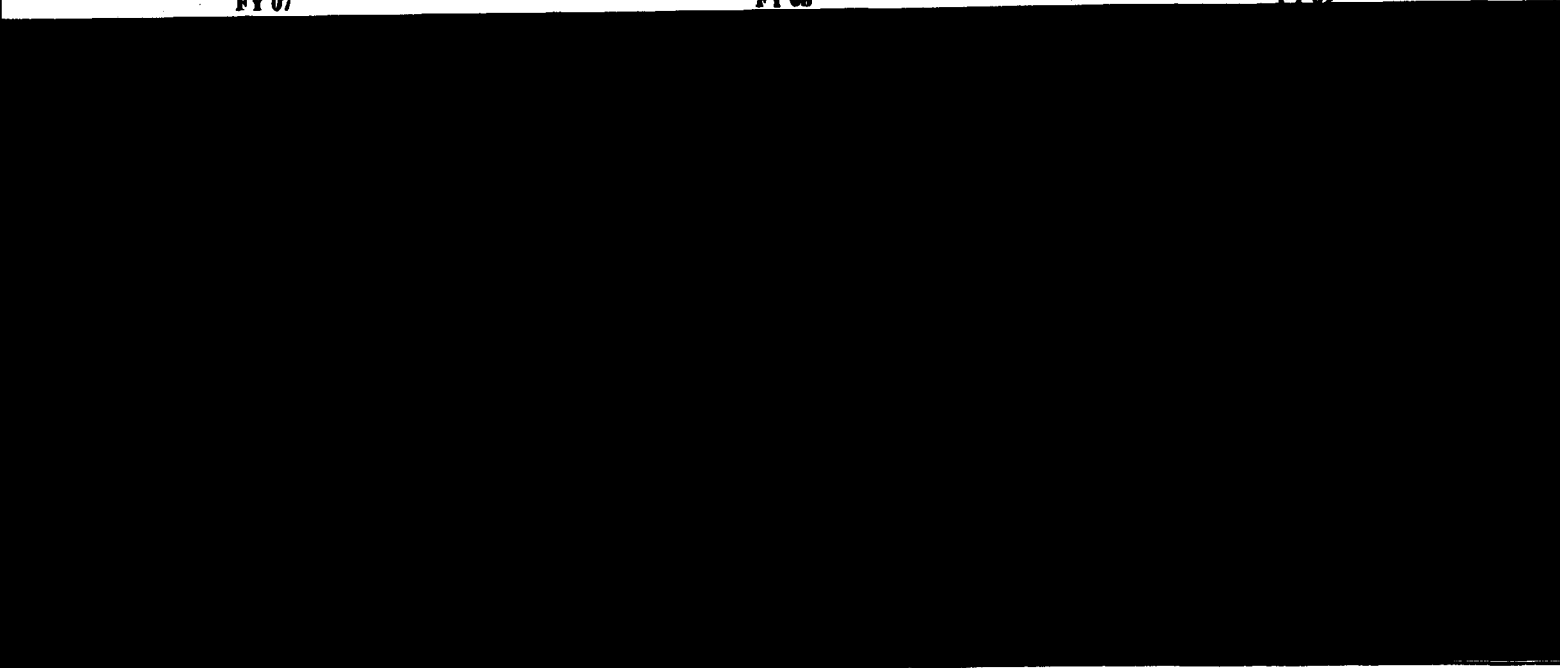

(U//FOUO) In addition to Directorate acquisition support, this project also includes NRO Corporate Systems Integration and Engineering (SI&E) activities. Resources for SI&E provide support for:

- (U//FOUO) Providing oversight and management of NRO corporate-level systems engineering processes.

- (U//FOUO) Developing and managing an Integrated NRO Architecture to produce new and innovative solutions that leverage Mission Partner efforts and build upon multi-INT information.
- (U//FOUO) Implementing effective NRO-level acquisition, engineering, mission assurance, and industrial base policies, processes, and initiatives.
- (U//FOUO) Informing and providing the technical basis for enterprise-level programmatic decisions.
- (U//FOUO) Raising the level of systems engineering and program management expertise across the NRO.
- (U//FOUO) Forming the set of cross-agency mission integration activities which evolve the separate NRP, NGP, CCP, and GDIP programs in accordance with the DNI's priorities.

(U) ENTERPRISE MANAGEMENT
(U) NRO MISSION SUPPORT

This Exhibit is SECRET//NOFORN

Totals may not add due to rounding

(U) Description

(U//FOUO) The NRO Mission Support (NMS) project supports the Director, NRO's *Strategic Framework*, published in April 2006, on building an integrated overhead architecture responsive to current and future needs of the IC and DoD. The NMS project is charged with ensuring effective NRO support to external users that includes understanding their information needs, educating them on current collection capabilities, and developing new capabilities to solve their operational and intelligence problems. More specifically, the NMS project:

• (S//

• (S//

• (U//FOUO) Provides special technical operations support to the Joint Function Component Command for Space (JCC-SPACE) and COCOMs with integrated planning for operational and compartmented activities.

• (S//

• (S//

• (U//FOUO) Provides command and control capabilities for NRO leadership during contingency operations and exercises.

• (U//FOUO) Develops new user applications that maximize the utility of national system capabilities and data through collaboration across the NRO, government, industry, and academic communities.

• (U//FOUO) Enhances engagement with tactical users to fully understand their real-time information needs. Provide users access to real-time national systems data derived from overhead systems, thereby facilitating mission success and averting casualties.

• (S//

[REDACTED]

- (U//FOUO) Provides NRO field representatives to US government agencies and COCOMs to facilitate the exchange of information, requirements and access to collection capabilities.
- (U) Provides users with innovative, technical and multidiscipline solutions to priority operational and intelligence problems.
- (U) Provides advanced technology prototyping to meet rapid response requirements.

Totals may not add due to rounding

(U) Description

(U//~~FOUO~~) This project funds systems engineering and architecture studies, technology assessment, modeling and analysis, risk management, systems integration, and customer requirements and engineering controls processes necessary to plan for and manage the NRO communications enterprise within a service management-driven infrastructure to ensure end-to-end service delivery and customer satisfaction. Specifically this project will:

- (U) Monitor enterprise IT systems and space communications activities for efficient compliance with the allocated COMM architectural requirements.
- (U) Integrate current and future NRO communications architecture initiatives into the broader Integrated NRO Architecture and the overarching National Intelligence Collection Architecture.
- (U) Support a customer needs assessment program to collect our customer's strategic mission and mission support needs to effectively align COMM IT services to meet customer's future mission technology needs.
- (U//~~FOUO~~) Support studies to identify/integrate investments necessary for NRO communications COOP and survivability.

- (U//~~FOUO~~) Interact with other NRO activities and IC partners to ensure end-to-end continuity and security of essential functions in primary and reconstituted modes in order to ensure access to critical communications capabilities across IC agencies and customers.
- (U//~~FOUO~~) Architect, plan, sustain, and improve information assurance capabilities needed to enable information and operational network security while protecting against denial of service attacks and the compromise of sensitive and compartmented information.
- (U) Coordinate and integrate schedules with other NRO directorates and offices and IC partners to support service delivery.
- (U) Collect and evaluate performance metrics to enable COMM to rapidly identify corrective actions for potential NRO network problems and to improve process performance.
- (U) Perform pre-deployment modeling and simulation of network changes by collecting and analyze live network data at the services level.
- (U//~~FOUO~~) Utilize Independent Test and Evaluation Center to perform pre-deployment independent verification/validation testing and perform test anomaly resolution to support operational networks.
- (U) Employ Service Management framework and best practices to develop, manage, and deliver IT services in an efficient and effective manner.

- (U) Perform cross-directorate systems engineering, architecture, business planning, and coordination between NRO and IC to ensure compatibility and commonality.

- (U) Support customer requirements, baseline configuration control, FISMA, and Management Control Program to ensure processes include the necessary internal controls to mitigate risk of fraud, waste, and mismanagement of resources.

(U) FUNCTIONAL AVAILABILITY AND SATELLITE LIFE ESTIMATES

(U) Background

(U) In 1997, the Mean Mission Duration (MMD) Panel recommended the development of a standardized process for determining satellite life and constellation replenishment criteria based on mission satisfaction. In response, the NRO developed the Functional Availability (FA) process, which employs a combination of probability theory, manufacturer's wear-out data, on-orbit experience, and constellation mission satisfaction.

(U) Functional Availability

(U) Functional Availability is the probability that a *constellation of satellites* will meet specific mission requirements at a future point in time. In addition to estimates for wear-out and random failures of satellite components, FA depends on assumptions regarding future events such as the replenishment schedule. Different measures of FA may be defined for a constellation, corresponding to different missions of the same constellation.

(U) NRO program offices initiate the FA methodology at the piece parts reliability level up through the component, subsystem, system, and satellite, to the constellation level. The data is displayed as a curve that provides FA as a function of time.

(U) **Reliability.** A satellite's reliability is the probability that it will remain operable and mission worthy at some future point in time, given everything known about its current status and future operation. Reliability functions provide this probability as a function of time, and usually decline continuously. Reliability functions are constructed for key components that can be aggregated, enabling the construction of mathematical reliability models, as with FA, for larger systems.

(U) **Life Estimates.** A satellite's life estimate is derived from its reliability function. The satellite's mean life estimate (MLE), given in years, represents the expected average life. Typically, a satellite has about a 50 percent chance of operating beyond its current MLE. Decisionmakers should not use MLE as the sole basis for satellite replenishment or to justify conclusions about constellation capability.

(U) **Risk Management.** FA is primarily a risk management tool for senior leadership in the NRO. FA charts indicate constellation mission satisfaction over time and illustrate the mission impact of launch failures, schedule changes, and on-orbit failures. Ideally, the NRO constellation replenishment plan should ensure that FA levels remain above minimum thresholds. However, current affordability considerations do not permit optimal satellite acquisition and launch phasing.

(U) PROGRAM ASSESSMENT RATING TOOL (PART) SUMMARY

(U) Program/Activity Evaluated in 2007

(U) Program: *National Reconnaissance Program and NRO Military Intelligence Program*

(U) *Advanced Systems and Technology (AS&T) Program*

(U) Activity Summary/Description

(U) Advanced Systems and Technology (AS&T) conceives and develops technologies and demonstrates new systems to increase actionable intelligence in support of the NRO mission and strategic goals. NRO AS&T's strategic vision, derived from the NRO Strategic Framework, is to accelerate the pace of innovative technologies, reduce the time to market, and develop new sources and methods.

(U) Activity Funding Level (\$M)¹

This Exhibit is ~~SECRET//NOFORN~~

~~TOP SECRET//SI//TK//NOFORN~~

(U) Rating: Moderately Effective

Section	Scoring Score
Program Purpose and Design	100%
Strategic Planning	91%
Program Management	89%
Program Results/Accountability	67%
Overall Weighted Score	80%

(U) Appropriation Type

(U) *Capital Assets and Service Acquisition*

(U) *Research and Development*

(U) Findings

(U//FOUO) Finding 1: The purpose of the NRO AS&T Program is clear and AS&T leadership has ambitious corporate goals that are aligned with the Programs' mandate. The AS&T Program addresses current and relevant technology and intelligence needs. It is not duplicative of other public or private sector efforts and its outputs reach the intended beneficiaries. It has no performance limiting design flaws.

(U//FOUO) Finding 3: The Program is generally well managed, and the leadership is proactive in addressing any identified problems.

(S) [redacted]
(S) [redacted]

(U//~~FOUO~~) Finding 6: Program partners commit to the goals of the AS&T Program. The Program collaborates and coordinates well with related Programs, and conducts intensive coordination efforts with other federal space and science and technology agencies. For example, AS&T's practice of assigning personnel to customer organizations to assist with technology transitions demonstrates a clear commitment to program success. AS&T would benefit from a more structured mechanism that documents feedback from customers.

(U//~~FOUO~~) Finding 7: Timely, quality independent reviews of the bulk of the AS&T Program are available and are largely positive.

[REDACTED]

(U//~~FOUO~~) Finding 8: The AS&T Program evaluates the benefits of alternative investments, uses a prioritization process to guide budget requests, and uses management processes to maintain Program quality.

(U) Follow-Up Actions (Improvement Plan)

(U) As a result of the PART evaluation, the NRO and the AS&T Program are initiating the following actions to improve the performance of the Program.

(U//~~FOUO~~) Follow-Up Action 1: [REDACTED]

[REDACTED]

(U//~~FOUO~~) Follow-Up Action 2: Clearly documenting Strategy, Technology, and Engineering Panel findings.

(U//~~FOUO~~) Follow-up Action 3: Establishing a more structured mechanism that documents feedback from customers.

(U//~~FOUO~~) Follow-Up Action 4: Reviewing measures that have moving averages to determine if there is a time period that is more meaningful.

(U//~~FOUO~~) Follow-Up Action 5: [REDACTED]

(U) Program/Activity Evaluated in 2006

(U) Program: National Reconnaissance Program and NRO Military Intelligence Program

(U) Communications (COMM) Program

(U) Activity Summary/Description

(U) The NRO Communications Program provides the telecommunications network (space and ground) system and enterprise IT services necessary to support the NRO's development, launch, and operation of space reconnaissance systems and other NRO intelligence-related activities. The Program evaluated in the PART includes the activities of the NRO Communications Systems Acquisition and Operations Directorate (COMM) and NRO's joint responsibilities and interfaces with mission partners and oversight/policy management organizations.

² ~~(S//TK)~~

³ (U) The values within the parentheses in the actual column denote the number of programs that met the target, and the total number of programs.

(U) Appropriation Type

(U) Capital Assets and Service Acquisition

(U) Findings

(U) Finding 1: The purpose of the NRO COMM Program is clear. It addresses current and relevant needs for communication and IT services; it is not duplicative of other public or private sector efforts; and its outputs reach the intended beneficiaries.

(S//TK//
[REDACTED]

(U//FOUO) Finding 3: The COMM Program uses short- and long-term outcome and efficiency measures and targets for operational elements and output measures and targets for acquisition elements of the Program. In addition, the Program is developing measures of progress toward strategic plan objectives, annual schedule for meeting strategic plan objectives, and alignment of strategic plans, budgets, and schedules.

(U//FOUO) Finding 4: The COMM Program has procedures in place to measure efficiency and demonstrates improved cost effectiveness in achieving Program goals each year. It has established a clear measure of cost effectiveness: [REDACTED]

(U//FOUO) Finding 5: The space and terrestrial elements of the Program collaborate and coordinate well with related programs, particularly in day-to-day operations.

(U//FOUO) Finding 6: Timely, quality independent reviews of the bulk of the COMM Program are available. Many of the reviews indicate that the Program is performing its mission very well and provides excellent customer services; others identify issues that could affect, or have affected, customer satisfaction, network security, or other outcomes. [REDACTED]

(S//
[REDACTED]

(U//FOUO) Finding 8: The NRO COMM Program clearly defines deliverables and regularly collects and uses performance information. However, the IC needs to improve budget presentation such that resource needs are well understood and more clearly linked to performance.

(U//FOUO) Finding 9: [REDACTED]

(S//TK//
[REDACTED]

(U//FOUO) Finding 11: As of the FY 2006 PART evaluation, the COMM Program met most of its long-term and annual goals.

• (S//TK//
[REDACTED]

• (S//TK//
[REDACTED]

• (S//TK//
[REDACTED]

• (U//FOUO) The Program is meeting annual goals and is on track to meet the long-term targets for Terrestrial Network Capacity.

• (U//FOUO) The Program is demonstrating efficiencies in achieving Program goals each year.

(U//FOUO) Finding 12: NRO COMM has established the following additional measures, with baselines and targets, which are not reflected in the measures summary tables.

• (S//TK//
[REDACTED]

• (U//FOUO) During FY 2004 - FY 2006, the COMM Program met its annual goals for Operational Availability for SPG activities.
[REDACTED]

• (U//FOUO) The COMM Program gathers Patriot contract metrics on a monthly basis to determine contractor performance, and holds the contractor accountable for falling below minimum acceptable objectives.

(U) Follow-Up Actions (Improvement Plan)

(U) The COMM Program continues to implement the following actions to improve the performance of the Program.

(S//TK//
[REDACTED]

• (S//TK//NF)
[REDACTED]

• (S//TK//NF)
[REDACTED]

• (S//TK//NF)
[REDACTED]

[REDACTED]

(U//FOUO) Follow-Up Action 2: Developing and implementing methods to track and manage progress and performance on meeting goals and objectives established in strategic plans and business plans. Improving traceability between COMM-level strategic plans and higher-order plans at the NRO and DNI levels.

- (U//FOUO) (Year Began: 2006. *Completed*). COMM restructured its Strategic Management Process in late FY 2006 and early FY 2007 to strengthen tracking and management of progress in meeting the objectives established in its annual Strategic Plan. Objectives are aligned with the NRO Strategic Framework and the NIS. A Business Plan outlines how project work activities trace to budgets, objectives, master scheduled items, and architectural artifacts. COMM Senior Management reviews progress and performance against objectives on a quarterly basis.

(U//FOUO) Follow-Up Action 3: Improving traceability between customers needs, strategic plans, business/operating plans, requirements, architecture, and budgets. This includes improving processes to assure more timely updates of requirements and related planning documents (architectures, business plans, analyses of alternatives, etc.) reflect evolving user needs (e.g., next generation IMINT requirements).

- (U//FOUO) (Year Began: 2006. *Completed*). COMM restructured and updated its Integrated COMM Architecture and Requirement Document (ICARD) to capture capstone requirements, key functionality-based architectural artifacts from the approved NGCA, and emerging customer needs. COMM has integrated architecture and requirements efforts with its Strategic Management process.

(U//FOUO) Follow-Up Action 4: Ensuring clear documentation of approved waivers to published availability goals.

- (S//TK//NF) [REDACTED]

[REDACTED]

(U//FOUO) Follow-Up Action 5: Improving coordination with stakeholders on programmatic decisions that affect communications system and service performance. [REDACTED]

- (S//TK//NF) [REDACTED]

- (S//TK//NF) [REDACTED]

- (S//TK//NF) [REDACTED]

- (S//TK//NF) [REDACTED]

(U//FOUO) Follow-Up Action 7: Ensuring that acquisition baselines and performance are adequately and clearly documented in the BAAR, where BAARs are required, and that BAARs are updated in a timely manner.

• (S//TK//NF) [REDACTED]

(U//FOUO) Follow-Up Action 8: Addressing material weaknesses and reportable conditions identified in independent audits with a goal of regaining an unqualified opinion in the FY 2009 audit.

• (U//FOUO) [REDACTED]

(U) Follow-up Action 9: Using ICEs to help define program budgets.

• (S//TK//NF) [REDACTED]

• (S//TK//NF) [REDACTED]

(U//FOUO) [New] Follow-Up Action 11: Establishing clear cost, schedule, and performance baselines that describe deliverables and functionality for the integrated COMM ground system within an overarching integrated ground architecture construct.

• (S) [REDACTED]

~~TOP SECRET//SI//TK//NOFORN//25X1~~

(U) GLOSSARY

(U) AGI—Advanced Geospatial Intelligence.

(U) AGP—Advanced GEOINT Processing. Processing of advanced geospatial intelligence derived from imagery.

~~(S//TK)~~ [REDACTED]

~~(S//TK)~~ [REDACTED]

(U) AOCO—Airborne Overhead Cooperative Operations. System that uses near real-time air and space SIGINT tipping, collection and processing to geolocate and cross cue targets to imagery.

(U) AR&D—advanced research and development.

~~(S//TK)~~ [REDACTED]

(U) AS&T—Advanced Systems and Technology, NRO directorate.

(U) ASME—Automated Spectrum Monitoring Equipment.

(U) ATM—asynchronous transfer mode. A high-bandwidth method of transporting information designed to integrate the transport of all services on a single network.

~~(S//TK)~~ [REDACTED]

(U) BAAR—baseline agreement and acquisition report.

(U) BOL—beginning-of-life.

~~(S)~~ [REDACTED]

(U) BPO—Business Plans and Operations office.

(U) BSR—budget sufficiency review.

(U) C&C—command and control.

(U) CAAS—contracted advisory and assistance services. Services under contract by non-governmental sources to provide management and professional support; studies, analyses, and evaluations; or engineering and technical support.

(U) CAIG—Cost Analysis Improvement Group.

~~(S)~~ [REDACTED]

(U) CCAFS—Cape Canaveral Air Force Station.

(U) CCS—constellation calibration services.

~~(S//TK)~~ [REDACTED]

(U) CDR—critical design review.

(U) CMA—collection management authority.

(U) CNT—carbon nanotube. A one-atom thick sheet of graphite rolled up into a seamless cylinder with diameter on the order of a nanometer.

~~(S)~~ [REDACTED]

~~(S//TK)~~ [REDACTED]

(U) COMINT—Communications Intelligence.

(U) COMM—NRO Communications Directorate.

(U) COMSAT—communications satellite.

(U) COMSEC—communications security. Hardware and firmware devices and accompanying software used to encrypt/decrypt data.

(S//
[REDACTED]

(U) CS/CS—cross-site/cross-system. A term used in conjunction with the capability to manage multiple systems over various locations.

(U) CSB—common software baseline.

(U) CSPAR—Central Strategic Processing Analysis and Reporting.

(U) CSS—Central Security Services. Ran by NSA and formerly known as Regional Security Operations Centers (RSOC).

(S//TK
[REDACTED]

(S//TK
[REDACTED]

(U) DAR Recap—data acquisition and routing recapitalization.

(S//TK
[REDACTED]

(U) DCGS—Distributed Common Ground System.

(U) DIB—DCGS Integrated Backbone.

(U) DICES—Digital Integrated Communications Electronics System.

(U) DII—Director's Innovation Initiative. An AS&T program that transitions almost 50 percent of its unclassified advanced technology investigations to funded follow-on research efforts inside the NRO, the Intelligence Community, and the DoD, providing those communities with advanced technology concepts for future systems.

(U) DLA—Defense Logistics Agency.

(U) DMS—Defense Messaging System. A DoD and IC standards-based organizational messaging architecture scheduled to replace the Site Communications Processor system.

(U) E1—echelon 1. Immediate maintenance activities supporting operational systems.

(U) E2—echelon 2. Factory maintenance in support of ongoing operational systems.

(U) EA—Enterprise Architecture. Primary purpose of EA is to ensure that business strategy and IT investments are aligned. As such, EA allows traceability from the business strategy down to the underlying technology.

(U) EAAF—Enterprise Architecture Assessment Framework. Uses thirteen assessment criteria to evaluate the maturity and effectiveness of agency enterprise architecture programs.

(U) EC—expenditure center.

(S//
[REDACTED]

(U//FOUO)
[REDACTED]

(U) EELV—Evolved Expendable Launch Vehicle. The name for the family of launch vehicle, which replaced the Titan and Atlas (II and III) launch vehicles. The EELV vehicle family is comprised of multiple configurations of the Lockheed-Martin Atlas V and the Boeing Delta IV.

(S//
[REDACTED]

(U) EKMS—Electronic Key Management System. Interoperable collection of systems developed to automate planning, ordering, generating, distributing, storing, filing, using, and destroying of electronic key and management of other types of COMSEC material.

(U) ELC—EELV Launch Capability contract.

(U) EMOC—Enterprise Management Operation Center. A 24-hour operational facility that monitors, defends, and controls the information enterprise for the NRO.

(U) EO—electro-optical.

(U) EPF—Eastern Processing Facility. Scheduled for completion in FY 2009, the EPF will be the primary NRO facility for processing and preparing spacecraft for launch from the Eastern Range.

(U) ERP—enterprise resource planning.

(U) ESD—earliest service date.

(U) FA—functional availability. A measure of system performance that incorporates both improved estimates of satellite life and addresses user requirements.

(U//FOUO) [REDACTED]

(U) FASM—Focused Area SIGINT Mapping. One of three FA curves used to describe the system performance of IOSA high altitude spacecraft.

~~(S//TK)~~ [REDACTED]

(U) FFRDC—Federally Funded Research and Development Center. A non-profit corporation, sponsored by the government, for the purpose of performing, analyzing, integrating, supporting, or managing engineering, research, or development activities.

(U) FISMA—Federal Information Security Management Act.

(U) FOC—full operational capability.

(TS//SI) [REDACTED]

(U) FSR—final spacecraft review.

(U) Gbps—Gigabits per second (10^9 bits per second).

(U) GEO—geosynchronous orbit. An orbital regime at approximately 22,000 nautical miles characterized by its 24-hour orbital period which places an object in a stationary position relative to the Earth's rotation.

(U) GEOINT—Geospatial Intelligence.

~~(S)~~ [REDACTED]

(U) GMM—Ground Mission Manager.

(U) GOA—Government of Australia.

(U) GSB—Generation of Secret Bits.

(U) GSM—Global System for Mobile Communications or *Groupe Speciale Mobile*. A commercial digital telephone network standard developed in the early 1990's in Europe and now implemented worldwide.

~~(S//TK)~~ [REDACTED]

(U) HEO—highly elliptical orbit. A highly non-circular orbit characterized by a maximum altitude of 25,000 nautical miles and 12-hour orbital period.

(U) HI—Horizontal Integration

~~(S//TK)~~ [REDACTED]

~~(S)~~ [REDACTED]

(U) HR—human resources.

(U) HVT—high value target.

(U) IA—information assurance.

(U) IBS—Integrated Broadcast Service. A complex and dynamic intelligence dissemination "system of systems" that is a theater-tailored dissemination architecture with global connectivity using a common message format in support of current and programmed tactical and strategic warfare systems.

(U//~~FOUO~~) IBS-S—IBS SIMPLEX. A broadcast communications system relaying time-critical, tactical intelligence data in near real-time from national intelligence collection systems.

(U) ICE—Independent cost estimates.

(U) IED—improvised explosive device.

(U) ILV—intermediate launch vehicle.

~~(S//FK)~~ [REDACTED]

(U) IMINT—Imagery Intelligence and Geospatial Information.

~~(S//FK)~~ [REDACTED]

~~(S//FK)~~ [REDACTED]

(U) IOC—initial operational capability.

~~(S//FK)~~ [REDACTED]

~~(S//TK)~~ [REDACTED]

(U) IP/MPLS—internet protocol/multiprotocol label switching.

(S) (U) [REDACTED]

(U) IS—information systems.

(U) ISARA—Information Sharing & Routing Architecture. A new message handling system based on a common core built on emerging standards (includes XML) that can address current & future requirements.

(U) ISI—Innovative Solutions Initiative. Classified analog to the Director's Innovation Initiative.

(U) IV&V—Independent validation and verification.

~~(S//FK)~~ [REDACTED]

(U) JRD—Joint Requirements Document.

~~(S//FK)~~ [REDACTED]

~~(S//TK)~~ [REDACTED]

(U) KDP—key decision point.

(U) LEO—low earth orbit. An orbital regime between 90-600 nautical miles characterized by short orbital periods (approximately 90-100 minutes) that allow for frequent revisits per day.

(U) LPE—low power electronics.

(U) LPI/LPD—low probability of intercept/low probability of detection.

(S) (U) [REDACTED]

~~(S//FK)~~ [REDACTED]

(U) Mbps—Megabits per second (10⁶ bits per second).

(U) MCCS—Mission Critical Conferencing System. Multi-year project to provide mission voice services to the NRO.

(S//TK) [REDACTED]

(U) MCS—mission control system.

(U//FOUO) MDDS—M-22 Data Dissemination System

(S//TK) [REDACTED]

(U) MGS—mission ground station.

(U) MHz—megahertz (10⁶ Hertz or cycles per second).

(U) MIGS—Multi-INT Ground Service.

(U) MilPers—military personnel.

(U) MIND—Mission Integration and Development. The FIA ground segment that performs the architecture's mission management, communication relay management and data routing functions.

(U) MIPS—million instructions per second.

(U) MLE—mean life estimate. Estimate of remaining lifetime of a space asset taking into account current state and system reliability.

(U) MMD—mean mission duration.

(S//TK) [REDACTED]

(U)

(S//NF) [REDACTED]

(U) MPLS—Multiprotocol Label Switching. Data carrying mechanism that belongs to the family of packet-switching networks.

(U) MRB—Mission Requirements Board.

(S)

(U) [REDACTED]

(S//TK) [REDACTED]

(U) NAB—NRO Acquisition Board.

(U) NCG—NRO Cost Group.

(U) NGEL—Next Generation Edge LAN. Program that efficiently merges long-haul data with the desktop user through means of new, high-speed switching equipment serving as the interface between the campus LAN and long-haul communication.

(U) NCEO—Next Generation Electro-optic system.

(U) NGOS—Next Generation Overhead SIGINT. The IOSA follow-on architecture.

(U) NIIRS—National Imagery Interpretability Rating Scale. Standardize system for describing the intelligence tasks that can be performed using an image.

(U) NIS—*National Intelligence Strategy*.

(U) NMIS—NRO management information system.

(U) NMS—NRO Mission Support.

(U) NOPS—NRO Operations Squadron.

(U) NRP—National Reconnaissance Program.

(U) NTM—National Technical Means.

(U) OCMC—Overhead Collection Management Center. Joint, fully-integrated organization which brokers all SIGINT overhead requirements.

(U) OD&E—CIA Office of Development and Engineering.

(U) OEF—Operation ENDURING FREEDOM.

(U) OF—operations facility.

(U) OIF—Operation IRAQI FREEDOM.

(U) ONIR—overhead non-imaging infrared. A subset of MASINT focused on infrared signatures.

(S) [REDACTED]

(S//NF) [REDACTED]

(U) OPE—operational performance evaluation.

(U) OPELINT—Operational Electronic Intelligence.

~~(S//TK//NF)~~ [REDACTED]

(U) OSL—Office of Space Launch.

~~(S//TK//NF)~~ [REDACTED]

~~(S//TK//NF)~~ [REDACTED]

~~(S//TK//NF)~~ [REDACTED]

(U) PART—Program Assessment Rating Tool. OMB managed annual assessment of the performance of programs across the Federal Government.

(U) PATRIOT—NRO Communications Directorate contract.

(U) PCF—Pacific Communications Facility.

(U) PCS—permanent change of station.

(U) PCT—Pacific Communications Terminal.

(U) PDR—preliminary design review.

(U) Performance Objectives: Future Support - Budgeted activities that are not providing capabilities in the current budget year (FY 2009), but will significantly contribute to the outcomes, goals, and initiatives of the NIS mission objectives once they become operational (e.g., acquisition programs, research and technology programs.)

(U) Performance Objectives: Indirect Support - Operational or future budgeted activities that provide (or will provide) general support for intelligence activities (e.g. logistics, infrastructure, corporate management).

(U) Performance Objectives: Mission Objectives - One of the five mission objectives included in The National Intelligence Strategy of the United States of America, October 2005. Mission objectives relate to our efforts to predict, penetrate, and pre-empt threats to our national

security and to assist all who make and implement US national security policy, fight our wars, protect our nation, and enforce our laws in the implementation of national policy goals.

~~(S//TK//NF)~~ [REDACTED]

(U) PPA—personal performance assessment.

(U) PR/CSAR—personnel recovery/combat search and rescue.

(U) PROFORMA—weapons related, machine-to-machine signals intelligence and information.

~~(S//TK//NF)~~ [REDACTED]

(U) R/S—Relay Satellite.

~~(S//TK//NF)~~ [REDACTED]

~~(S//NF)~~ [REDACTED]

(U) RF—radio frequency or receive facility.

(U) RROC—Rapid Response Operations Center

~~(S//TK//NF)~~ [REDACTED]

(U) SAI—SIGINT Application and Integration.

(U) SAP—Systems, Applications, and Products in Data Processing. A German owned business software firm.

~~(S//TK//NF)~~ [REDACTED]

(U) SAR—synthetic aperture radar. A collection capability that uses returns from actively transmitted radar signals to produce high-resolution images regardless of weather or darkness.

(U) SCMIS—Secret collateral management information system.

(U) SCTV—spacecraft thermal vacuum test.

(U) SDR—system design review.

(S//TK) (U) SET—Small Earth Terminal. Antenna used for S-band communications to [REDACTED]

(U) SETA—system engineering and technical analysis.

(U) SI&E—system integration and engineering.

(U) SIGINT—Signals Intelligence.

~~(S//TK//NF)~~ [REDACTED]

~~(S//TK//NF)~~ [REDACTED]

(U) SOMMS—SIGINT Overhead Mission Management System. A hardware and software tool that provides OCMC the capability to allocate SIGINT satellites against intelligence targets in accordance with priorities and guidance established by the SIGINT Overhead Reconnaissance Subcommittee.

(U) SP—SIGINT production. A processor for SIGINT Low.

(U) SPIF—Spacecraft Processing and Integration Facility.

~~(S//)~~ [REDACTED]

(U) SRR—system requirements review.

(U) STO—special technical operations.

(U) STR—SIGINT Test Range.

(U) SURREY—NSA's source of SIGINT requirements under the Unified Cryptologic Architecture.

(U) SV—space vehicle.

~~(S//)~~ [REDACTED]

(U) TECHELINT—Technical Electronic Intelligence.

~~(TS//SI//TK//)~~ [REDACTED]

(U) TI—technical intelligence.

~~(S//)~~ [REDACTED]

~~(S//)~~ [REDACTED]

(U) TTP—tactics, techniques, and procedures.

(U) UGA—unified ground architecture.

(U) ULA—United Launch Alliance. The Lockheed-Martin/Boeing joint venture for manufacturing and supporting the Atlas and Delta EELV booster systems.

(U) UMIS—unclassified management information system.

(U) USAT—ultra small aperture terminal.

(U) UWAN—unclassified wide-area network. NRO's unclassified network.

(U) VAFB—Vandenberg Air Force Base.

~~(S//SI//TK//)~~ [REDACTED]

(U) WAN—wide area network.
