### **Roll-out of the NRO's ARC 2.0 – Improving Acquisition Outreach Among Business, Industry, and the Intelligence Community**

Both industry and government are praising the recent rollout of the enhanced version of the National Reconnaissance Office's (NRO) Intelligence Community (IC) Acquisition Research Center (ARC). ARC 2.0 provides a gateway for industry to IC business opportunities. It facilitates even broader outreach to industry partners through improved and updated communication.

ARC 2.0 features a new "Innovation Portal." The Innovation Portal provides a single link to a repository of NRO solicitations containing the latest advanced technologies and ideas. Users from industry and academia can view and respond to business opportunities, or submit white papers, addressing IC requirements and challenges.

ARC 2.0's corporate registry helps industry identify potential sub-contractors, or teaming partners, to facilitate a comprehensive and competitive bid that brings the best solution to the NRO's most challenging problems.

Visit ARC 2.0 to register to see business opportunities, or request information at: <https://acq.westfields.net>.

-NRO-

The NRO is a joint Department of Defense-Intelligence Community organization responsible for developing, launching, and operating America's intelligence satellites to meet the national security needs of our nation.
