5. [redacted]

*Arrival date has been changed to 29 April.

Declassified and Released by the NRC

6. [REDACTED]

[REDACTED]

7. THE COMMAND POST EXERCISE - Operations recalled that the command post exercise run in connection with the last CORONA activity was successful. It covered weather, flight lines and communications. As a result of this exercise, it was decided that the installation of a teletype machine at VAFB was not necessary since all communication was within the one-hour limit specified by Mr. Bissell as acceptable.

8. STAGE OF DEVELOPMENT - CORONA PROJECT - Trouble is still being experienced in the shake tests of the camera. However, due to the fact that the prime contractor has need for the equipment, it has been decided to ship the camera to Palo Alto before completion of the tests. All concerned believe that the shake tests can be conducted at Palo Alto. An evaluation will be made to determine if the equipment is ready for the first flight.

The next CORONA meeting is scheduled for 23 April.
