ANNUAL REPORT ON INTELLIGENCE
INFORMATION HANDLING

1. The CORONA [REDACTED] was tested, exercised in simulated operations, and used operationally during this period. To support this new software system, a real-time communications link between [REDACTED] CIA/Data Communications Center, CIA/OCS Computer Center, and the Satellite Operations Center was implemented. (Chapter 3)
2. The Area History File program was tested and data covering 3 1/2 years installed. Upon correction of a few minor problems, the capability will be available to interrogate the file in several ways concerning CORONA coverage of the Sino-Soviet Bloc. (Chapter 3)
3. The digitizer for the Area Coverage Program was completed, tested, and accepted during this year. This device permits an operator to manually contour areas of CORONA pan photography which are unacceptable for satisfaction of search requirements. The software to translate this output to WAC mosaic cells (nominally 18 x 12 n. mi.) seen in acceptable photography was completed and testing of the over-all system is nearly finished. (Chapter 3)
