MEMORANDUM FOR MR. SINGEL/GENERAL KULPA

SUBJECT: Summary of Aircraft Discussion with Secretary Plummer

In order to proceed with the resolution of the role of the NRO in denied area overflight, Mr. Plummer would like a set of pro's and con's relative to the question. While he does not desire any detailed compilation of procedures at this time, a "bare bones" procedural approach might be useful as a discussion tool in evaluating options. In his discussions with Mr. Singel he mentioned several positive aspects of the NRO control over overflights. These were:

1. Simply bringing the problem up for discussion would focus attention on the question and therefore, might encourage a cleanup of the lines of command for denied area overflight.

3. The NRO's quick reaction capability and streamlined management procedures could be used to speed work on developmental systems to either be tested or used by aircraft, e.g., sensors, photo technology, etc. In these areas the NRO possesses a greater wealth of knowledge than any other organization.

4. NRO authority over denied area overflights would force a thoughtful consideration of...insure that...complimentary in nature.

5. Related to the above, as we transition to this system, the NRO could coordinate...in the advent of
beneficial.

Mr. Colonel, USAF
Executive Assistant
