MEMORANDUM FOR MAJOR GENERAL HAYES

SUBJECT: U. S. Army Experiments in Multiband Synoptic Photography

In a recent memorandum (██████████ 740-66) to all military departments, limitations and restrictions were placed on military participation in NASA earth-sensing experiments.

Conferences with and briefings by representatives of your office during the past year have made me aware of the U. S. Army's strong interest in multiband synoptic photography experiments. I would like to invite your comments and recommendations for carrying out such an experiments using aircraft available to the NRO. I am thinking specifically of U-2 flights over selected sites in the United States, if U-2 altitudes are needed for meaningful experiments. I believe it would be worthwhile to examine this possibility, discussing flight requirements, camera configurations, application of the results to military problems, and related matters.
