

## CENTRAL INTELLIGENCE AGENCY

WASHINGTON, D.C. 20505

HANDLE VIA BYEMAN  
CONTROL SYSTEM

5 SEP 1967

MEMORANDUM FOR: Director, National Reconnaissance Office

SUBJECT: Revised FY 1969 Budgets

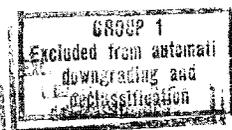

1. Attached hereto are revisions to the Agency's FY 1969 budget submissions for the IDEALIST and General Research & Development (Aircraft) programs.

2. The revised IDEALIST FY-69 program totals \$23.599 million as compared to the original estimate of \$23.375 million, a net increase of \$224K. The operational concept remains as stated in BYE-0045-67. The only significant differences from our original estimates occur in the Airborne Electronics and Camera areas of the New Equipment category. The changes are explained in the attached detailed review (Attachment A). The format has been changed in accordance with an informal request received from your office. Major categories are: New Equipment; Support; Maintenance Technicians; Construction, Operations and Maintenance.

a. Requirements for procurement of new equipment are listed on an individual item basis.

b. The Support category covers all contracts for spares, overhaul and engineering support, including airframe, cameras, airborne electronics, pilots, and life support. Each contract line item identifies funding required for the IDEALIST program, and that required for our share in items in which we have a common interest with the DRAGON LADY program. Where possible, we have identified costs applicable to U-2C and/or U-2R aircraft.

c. Maintenance Technicians comprise one category which covers all maintenance technicians from all contractors.

SUBJECT: Revised FY 1969 Budgets

d. Construction, Operations and Maintenance lists funding requirements by detachment, and Operations and Maintenance in a lump sum to cover all requirements.

3. The revised General Research & Development (Aircraft) FY-69 budget totals \$14.615 million (Attachment B) as compared to the original estimate of \$8.700 million, a net increase of \$5.915 million. OSA's portion of the revised R&D program amounts to \$7.965 million (Attachment B-1), and ORD's portion amounts to \$6.650 million (Attachment B-2).

HANDLE VIA BYEMAN  
CONTROL SYSTEM

NEW EQUIPMENT

Listed below are the items we feel must be funded during fiscal year 1969. A careful review of the status of the development of systems for which funding was requested in our previous submission indicates that Systems 13D, 21, and 23 will not complete flight testing until FY 1970. Hence, the request for funds for these systems is being deferred until 1970. Systems 6C and 9E should complete flight testing during FY 1969 and funding for these systems is requested herein.

The funding for the "H" Cameras is for the complete purchase although delivery of these three items would not be completed until FY 70. If partial funding were to be considered, then \$1.234M would satisfy FY 69 requirements. Funding for three lightweight "B" Cameras is requested to offset anticipated attrition.

AIRBORNE ELECTRONICS

System 6C	\$3.000
System 9E	1.200
System 13D	--
System 21	--
System 23	--
Timing System	<u>.200</u>
Total Airborne Electronics	4.400

CAMERAS

"H" Camera (3 ea)	2.716
"B" Camera (3 ea)	<u>.600</u>
Total Cameras	3.316

Total New Equipment 7.716

IDEALIST

SUPPORT

The Support Category provides funding for Spares and Overhaul and Engineering Support. Wherever possible we have identified costs applicable to U-2C or U-2R Aircraft. We have also identified contracts in which we have a common interest with the DRAGON LADY Program.

SUMMARY

Airframe	\$4.813
Cameras	1.558
Airborne Electronics	3.063
Pilots	<u>.819</u>
Total Support	\$10.253

MAINTENANCE TECHNICIANS

Funding request supports both Detachments "G" and "H". A breakout by U-2C and U-2R is not possible. Maintenance technicians have the capability to work on both systems. The Lockheed request is for total numbers of persons to support total numbers of aircraft rather than a breakout of C's and R's.

<u>SYSTEM</u>	<u>"G"</u>	<u>"H"</u>	<u>MILLIONS</u>

~~TOP SECRET~~

HANDLE VIA BYEMAN  
CONTROL SYSTEM

1. VEHICLES AND VEHICLE SYSTEMS

1. SUBJECT: Induced drag elimination on subsonic aircraft  
COST : \$200,000  
SCOPE : Continuation of confirmation program conducted during FY-68. To include:
  - a. Pressure measurements tests
  - b. Flight tests on a small "Piper Cub" type aircraft
  - c. Application study projecting the results obtained to a CIA high altitude mission.
  
2. SUBJECT: Preliminary Design of New Reconnaissance Vehicle  
COST : \$2,500,000  
SCOPE : Initiation of preliminary design effort of a new vehicle which appeared to have outstanding potential on the basis of investigations conducted during FY-68.
  
3. SUBJECT: General Aerodynamic Vehicle Systems and Subsystems Studies  
COST : \$200,000  
SCOPE : General studies, as applicable, of advanced aerodynamic vehicles, systems, and sub-systems improvements.

1. PROPULSION

1. SUBJECT: Application of Cryogenic Fuel Technology to Airbreathing Gas Turbine Propulsion Systems  
COST : \$2,165,000  
SCOPE : Procurement of a JT12 engine and all fuel system components required to operate this engine on Methane fuel. The engine will be calibrated, and performance and operating characteristics will be determined.

~~TOP SECRET~~

HANDLE VIA BYEMAN  
CONTROL SYSTEM

GROUP 1  
EXCLUDED FROM AUTOMATIC  
DOWNGRADING AND  
DECLASSIFICATION

2. SUBJECT: Improved High Altitude Engine Performance
- COST : \$250,000
- SCOPE : Evaluation of ideal engine cycles for high altitude reconnaissance applications, new engine designs as well as modifications to currently available or projected engines which most nearly approach the ideal cycles will be evaluated. Engine performance information will be provided to an airframe contractor(s) who will be evaluating or designing new reconnaissance vehicles.
3. SUBJECT: General Propulsion Studies
- COST : \$100,000
- SCOPE : General Studies, as applicable, of propulsion systems improvements applied to advanced and current vehicle systems.

1. SENSOR SYSTEMS

1. SUBJECT: Haze Attenuation Study
- COST : \$150,000
- SCOPE : Following the initial studies of FY-68, an experimental modification will be made and tested in existing airborne hardware. (Under conditions of heavy atmospheric haze, variations in exposure requirements from vertical to 75° off flight path often exceed the exposure latitude of the film being used. This study will explore the feasibility of applying a new filtering technique to the solution of this problem, allowing accurate exposures in the presence of varying conditions of solar azimuth, background scatter and camera pointing angles.)

~~TOP SECRET~~

HANDLE VIA BYEMAN  
CONTROL SYSTEM

2. SUBJECT: Sensor Applications Studies  
COST : \$150,000  
SCOPE : Studies regarding modifications of existing sensor systems for performance improvement, usability improvement and adaptation to the U-2 and U-2R programs.
3. SUBJECT: Sensor Modification Development  
COST : \$500,000  
SCOPE : The development of engineering models, and feasibility demonstrations of improved techniques in image collection to enhance operational capabilities. (Electrotape, micro channel, etc.)
4. SUBJECT: High Quality Photo Transmission  
COST : \$1,350,000  
SCOPE : Fabrication and development of proto-type hardware for a high quality photo transmission system.
5. SUBJECT : SLR Developments  
COST : \$200,000  
SCOPE : Continued development of improved usability of SLR sensors systems through improved resolution and pointing capability.
6. SUBJECT : Laser Scanning Camera  
COST : \$100,000  
SCOPE : Developmental studies on Laser Scanning Cameras as applied to high altitude reconnaissance vehicles.

~~TOP SECRET~~

GENERAL RESEARCH AND DEVELOPMENT  
ORD  
REVISED FY-69 BUDGET PROPOSAL

SUMMARY

I. Aircraft Sensors

A. High Resolution Infrared Reconnaissance Systems

The lack of significant funding toward the 1/50 mrad scanner in FY 68 will delete the requirement for aircraft installation and flight test funding in FY 69 (as previously recommended). However, this Office will continue to recommend that the 1/50 mrad scanner development be initiated, and toward that end the \$2000K for the 1/50 mrad scanner development, from the FY 68 recommendations, are now transferred to the FY 69 recommendations. (It is assumed \$100K for a design study will be approved during FY 68.) The remaining recommendations in the IR program -- continuing support for IR research, extended development of multiple detector techniques and real time viewers, and a moving-target indicator program - have not changed since last submitted and remain at \$1,600K.

(Original Budget Estimate \$2.600) Revised Estimate \$ 3.600K

In all other ORD project areas, no additional changes are recommended. These are repeated here in brief:

B. Multi-Spectral Photography	.400
C. Low Light Level Reconnaissance Systems	.600
D. Image Processing/Data Reduction	.450
E. Materials Research (600K ORD; 150K OSA -- originally budgeted 750K)	.600
L. Multisensor Systems	<u>1.000</u>
Revised Total	\$ 6.650K
