XIX.
The mission continued as planned.

The communication between the various elements of the equipment was maintained throughout the mission. The periodic checks were performed to ensure the equipment was functioning correctly.

The tracking of the spacecraft continued throughout the mission. The spacecraft was tracked until 21:26 UTC at the NASA tracking station and until 21:33 UTC at the Situation Station. The spacecraft was tracked.

The spacecraft continued to transmit data, and the communication was maintained until the end of the mission. The equipment was turned off, and the spacecraft was left in orbit.
4. ANOMALIES OBSERVED

A. ANOMALIES IN TRANSMISSION OF G2 SIGNALS WERE NOTED DURING THE CONSIDERATION.

5. CONCLUSION

The overall performance of the system was received from site-out to site-in by the apps and by those machine features and question marks with questions and of good quality. The communication was conducted with clarity and mutual understanding was achieved. Any fundamental power to some to the
