Suggested Names for 117L Vehicles

1. In Norse Mythology, Odin was the sky-father. He was a strange and solemn figure, always alone. He usually stayed in his golden palace, Valhallar, and he depended on two ravens to bring him news.

2. These ravens normally perched on Odin's shoulders, but each day they would fly through the world and bring him news of all that can be. The name of one raven was Thought (Huginn) and of the other Memory (Muninn). While the other gods feasted, Odin pondered on what Hugin and Muninn taught him.

3. It is suggested that these names be used where applicable in the 117L program.
